7th February 2009

21st February 2009

The course is of use to people who want to:

- Learn about the viability of making there own biodiesel for personal, business or farm.
- Start making biodiesel and want to see how it is best set up and manufactured.
- Wish to overcome production and specification issues, better the production process and resulting fuel.
- Make from 20 to 2000 liters of biodiesel per day.

This course is not aimed at commercial operators. Private courses have proven to give best value and knowledge to commercial operators, contact to discuss your needs.

KCER

Professional Training ©

The one day course in Melbourne Victoria what to expect:

- Starts at 10am and goes till 3 – 4 pm.
- We will make 2 batches of biodiesel from start to finish. I will thoroughly explain each step. The process is interactive so be prepared to get your hands oily.
- Discuss your personal situation and any specific biodiesel issues you have.
- We will test your oil supply if you bring a sample.
- Practice titrating so you are confident.
- Look at examples of biodiesel effects on rubber.
- Discuss plant design pros and cons.
- You are welcome and encouraged to copy plant designs for your own use.

To get the most out of the day some previous biodiesel experience is best. Even if you follow the simple biodiesel in a bottle instructions in the biodiesel manual and or read the book cover to cover. The book is sent to you before the course to encourage questions and to help you get the most out of the day.
